# POST-QUANTUM CRYPTO FOR EMBEDDED DEVICES?

## Outline

- Risk assessment: when to act?

### Embedded perspective

- PQC performance
- High-assurance implementations

## HOW TO PREPARE FOR HURRICANE SEASON Quantum

### MAKE A PLAN

Airmen should create an emergency plan and/or checklist

- obtain supplies
- update personal documents
- secure household
- research evacuation options/routes
- update prescriptions

### CREATE A GO-BAG

Prepare supplies ahead of a hurricane. These can include

- Food/water
- Additional clothes
- Personal documents
- Travel supplies
- Prescriptions

### KNOW YOUR WING GUIDANCE

Whether preparing for a hurricane or evacuating know your wing or installation's guidance. Routinely check for updates from leadership and maintain communication with your chain of command.

### RECOGNIZE WARNINGS & ALERTS

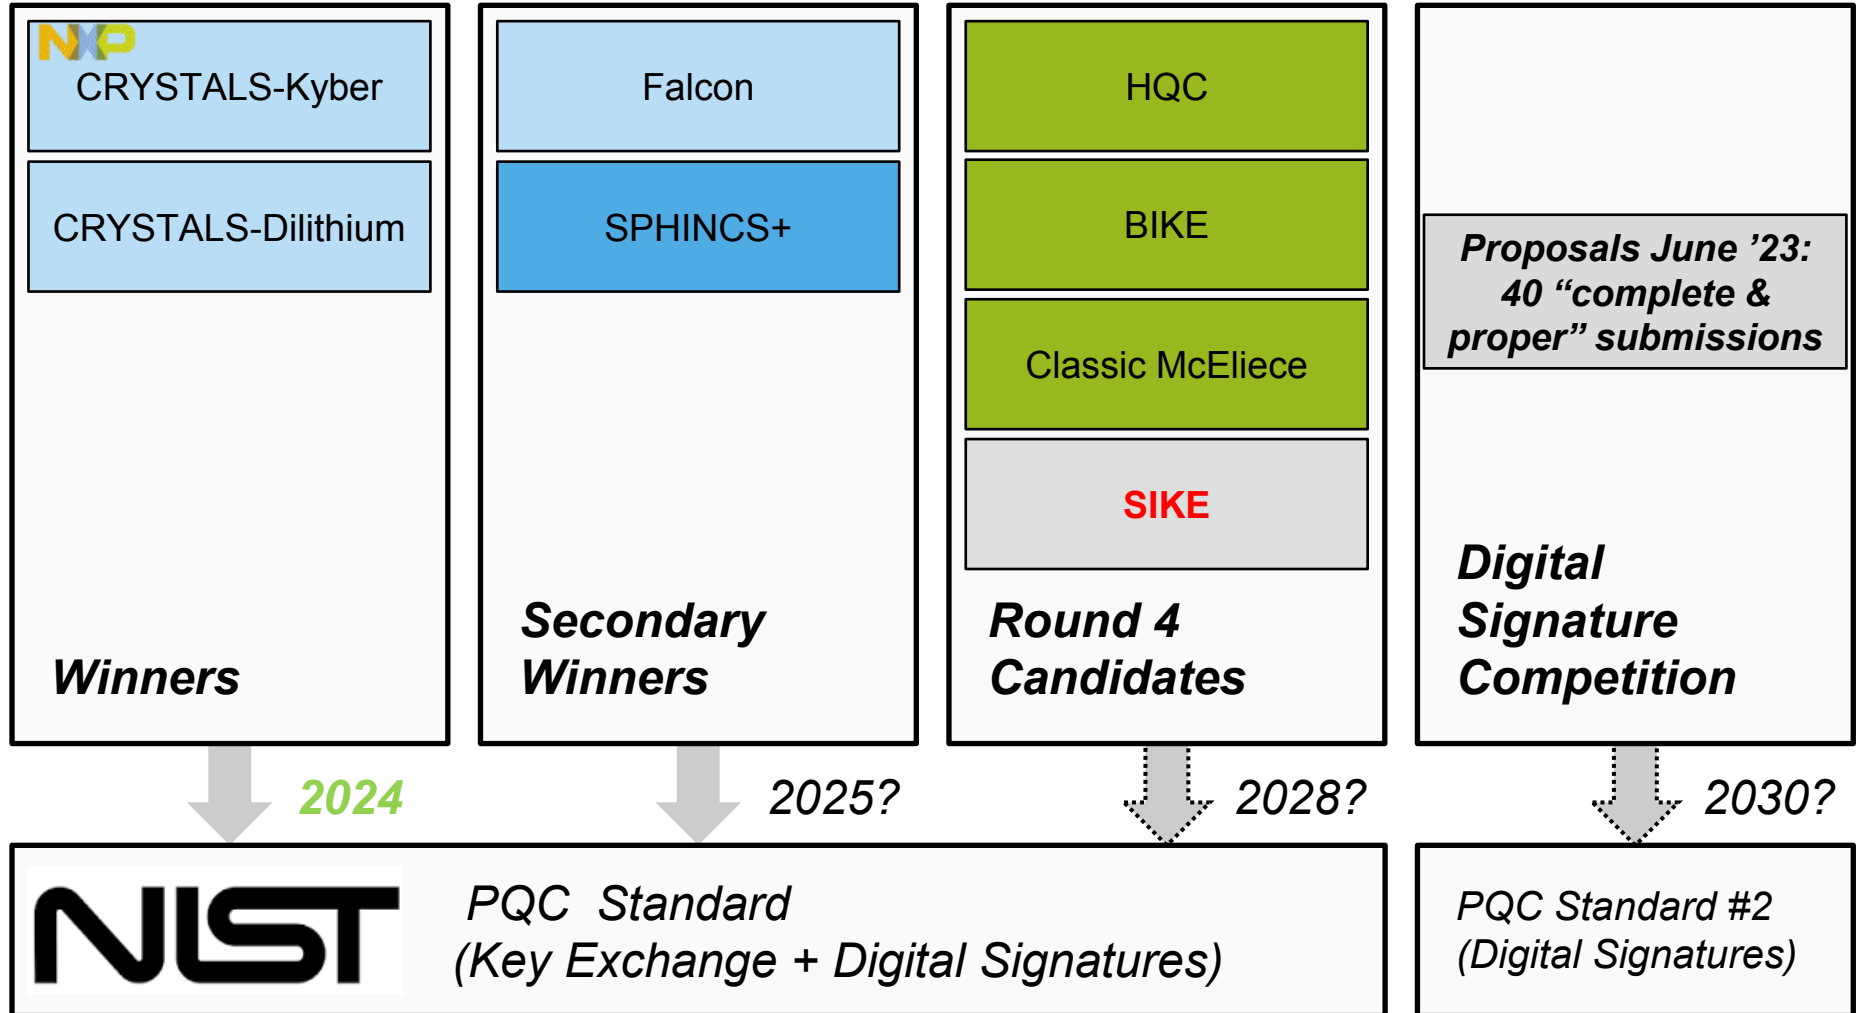

Have several ways to receive alerts. Download real-time alert apps. Sign up for community alerts in your area and be aware of the Emergency Alert System (EAS) and Wireless Emergency Alert (WEA)- which requires no-sign up.

### STAY SAFE

Practice good hygiene and safety measures during any part of a hurricane evacuation or impact. Keep family considerations in mind and don't be afraid to contact leadership for guidance.

# PQC STANDARDS – NIST

Color key: Mathematical approach

## HOW TO PREPARE FOR HURRICANE SEASON Quantum

**MAKE A PLAN**  
Aim to create an emergency plan and/or checklist

- obtain supplies
- update personal documents
- secure household
- research evacuation options/routes
- update prescriptions

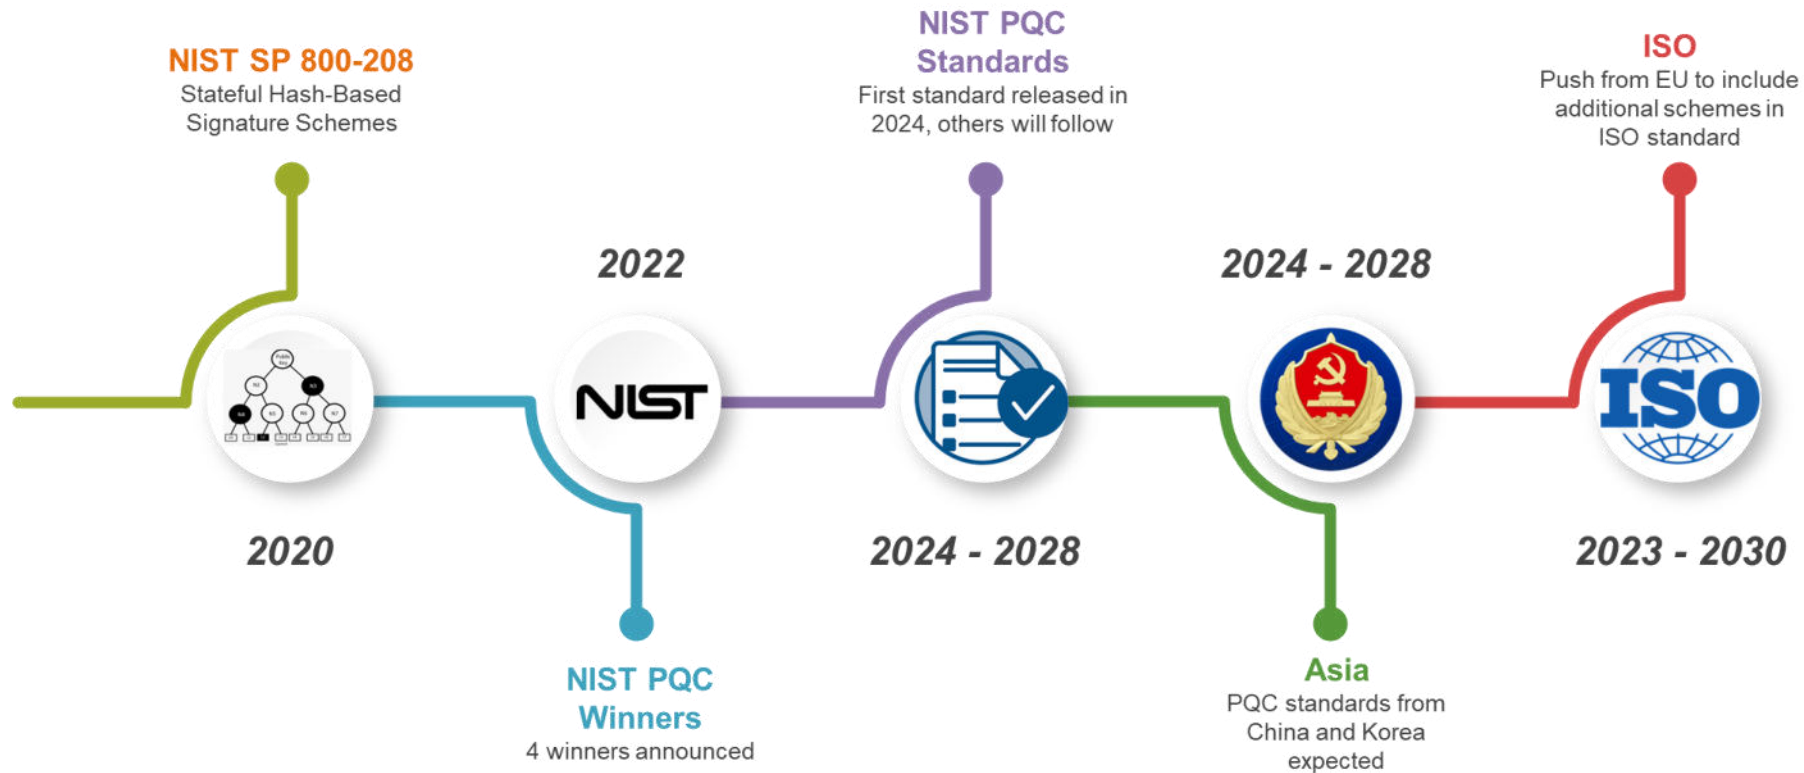

**CREATE A GO-BAG**  
Prepare supplies ahead of a hurricane. These can include

- Food/water
- Additional clothes
- Personal documents
- Travel supplies
- Prescriptions

**KNOW YOUR WING GUIDANCE**  
Whether preparing for a hurricane or evacuating know your wing or installation's guidance. Routinely check for updates from leadership and maintain communication with your chain of command.

**RECOGNIZE WARNINGS & ALERTS**  
Have several ways to receive alerts. Download real-time alert apps. Sign up for community alerts in your area and be aware of the Emergency Alert System (EAS) and Wireless Emergency Alert (WEA)- which requires no-sign up.

**STAY SAFE**  
Practice good hygiene and safety measures during any part of a hurricane evacuation or impact. Keep family considerations in mind and don't be afraid to contact leadership for guidance.

## National Standards

- **USA.** NIST announces standards release of 4 PQC schemes ('24 – '25). Additional standards to follow.
- **EU.** Push from EU for adding schemes to international standard. October '23: ISO to amend [ISO/IEC 18033-2](#).
- **ASIA.** Selection of new schemes ongoing in both China/Korea.

## Protocol Standards

- **IETF:** TLS, OpenPGP, hybrid keys, key serialization, encoding for signatures
- ISO/TC 68/SC 2/WG 11 (Encryption algorithms used in banking applications)
- ISO/IEC JTC1/SC 17/WG 4 (Cards and security devices for personal identification)

# PQC MIGRATION GUIDANCE BY GOVERNMENTS

## USA (NIST/NSA)

- [NIST/NSA recommendation](#) available
- Commercial National Security Algorithm Suite 2.0
- PQC FW signature recommended for new products after 2025
- PQC transition complete by 2030 using SW update

## Germany (BSI)

- [BSI first recommendation](#) (English)
- [BSI considerations](#) (German)
- Expectation is that beginning of 2030s, a relevant quantum computer is available to be a threat for high-secure applications
- Quantum security: considers both PQC + QKD

## France (ANSSI)

- PQC for security products “as soon as possible” when long-lasting (until 2030) protection is required
- Others to migrate to classic-PQC hybrid in 2025 – 2030
- Switch to PQC-only expected by 2030

# WHY DO WE WANT TO PROTECT KYBER / DILITHIUM?

## INDUSTRIAL & IOT

## AUTOMOTIVE

12B

70%

NIST chooses Kyber + Dilithium as primary new PQC standards

Transition

2022

2024

IoT Edge & end nodes from 6B units in 2021 to 12B units in 2025

70% connected cars by 2025

NIST publishes standardization documents.

## RUNNING PQC ON EMBEDDED DEVICES

**Key sizes**

**Performance**

**Memory usage**

What about high security implementation?

## PQC ON EMBEDDED DEVICES

What is embedded?

- NIST has recommended Arm Cortex-M4

**Pqm4:** Post-quantum crypto library for the ARM Cortex-M4, STM32F4DISCOVERY  
**196 KiB of RAM and 1 MiB of Flash ROM**

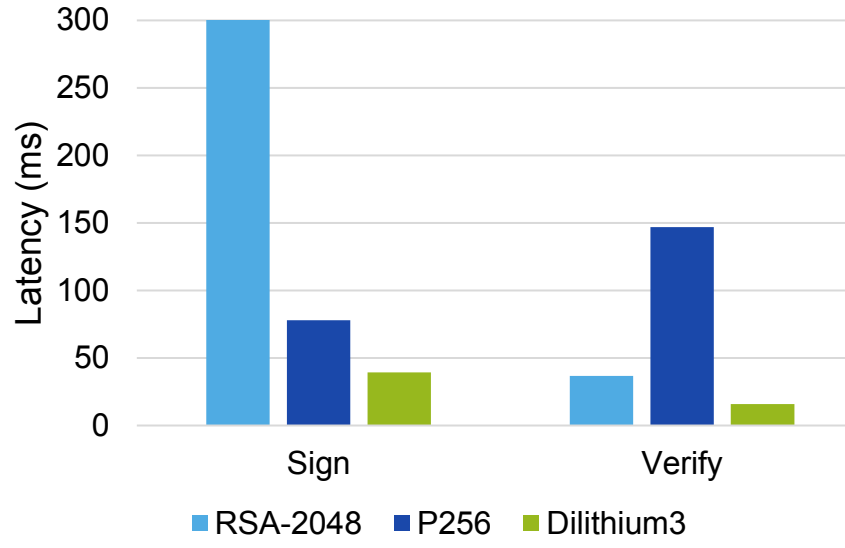

Low-power Edge computing: LPC800 Series

- 8 to 60 MHz Cortex-M0+ core
- { 4, 8, 16 } KiB of SRAM
- { 16, 32 } KiB Flash

Variant		Dilithium-3		
			KiB	$10^3$ cc
C only	PQClean [1]	K	59.4	3,504
		S	77.7	12,987
		V	56.4	3,666
	New [2]	K	6.4	5,112
		S	6.5	36,303
		V	2.7	7,249

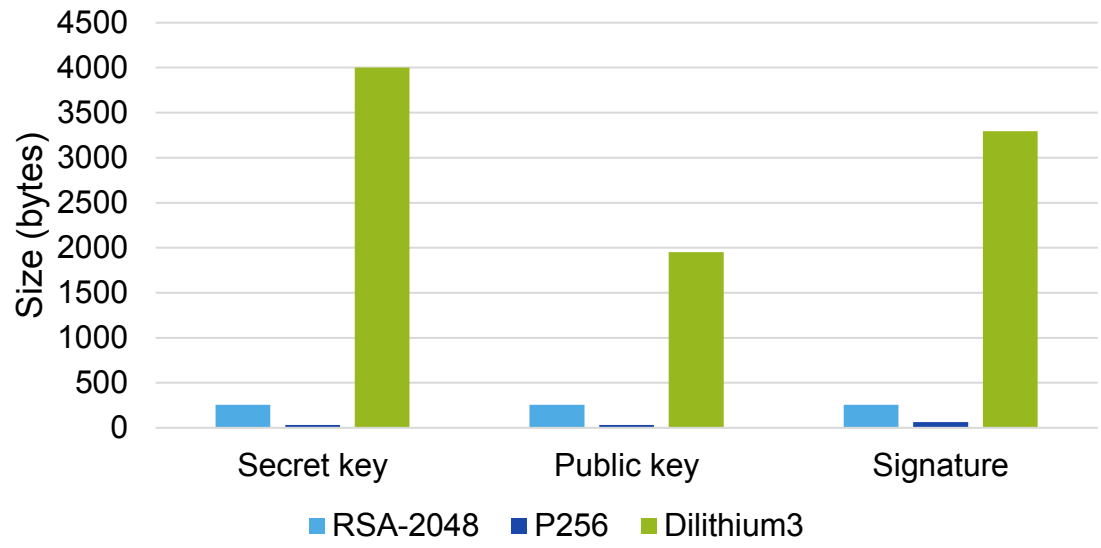

[1] M. J. Kannwischer, P. Schwabe, D. Stebila, and T. Wiggers: Improving Software Quality in Cryptography Standardization Projects. Security Standardization Research – EuroS&P Workshops. 2022.

[2] **J. W. Bos**, J. Renes and A. Sprenkels: Dilithium for Memory Constrained Devices. Africacrypt, LNCS, vol. 13503, Springer, 2022.

## DILITHIUM IMPACT

- Measurements on Cortex-M4 from pqm4 framework
- Functional implementation only (not hardened)
- Large trade-offs between stack and efficiency
- **80 ~ 90 percent** of run-time in SHA-3

# PQC SIGNATURE MIGRATION (EMBEDDED PERSPECTIVE)

Algorithm (Level 3)	PQ Secure?	Standard?	Efficient Signing?	Stateful?	Efficient Verify?	Need hybrid?	PK (Bytes)	Sig (Bytes)
ECC	No	FIPS 186	Yes	No	Yes	N/A	32 B	64 B
Dilithium	Yes	PQC (2024)	Yes	No	Yes	Yes	1952 B	3293 B
Falcon (L5)	Yes	PQC (2024)	No	No	Yes	Yes	1793 B	1280 B
SPHINCS+	Yes	PQC (2024)	No	No	Yes	No	48 B	16224 B
LMS / XMSS	Yes	SP 800-208	Yes?	Yes	Yes	No	60 B	1744 B

# FO-CALYPSE

SECURE CONNECTIONS  
FOR A SMARTER WORLD

PUBLIC

# High-assurance implementations

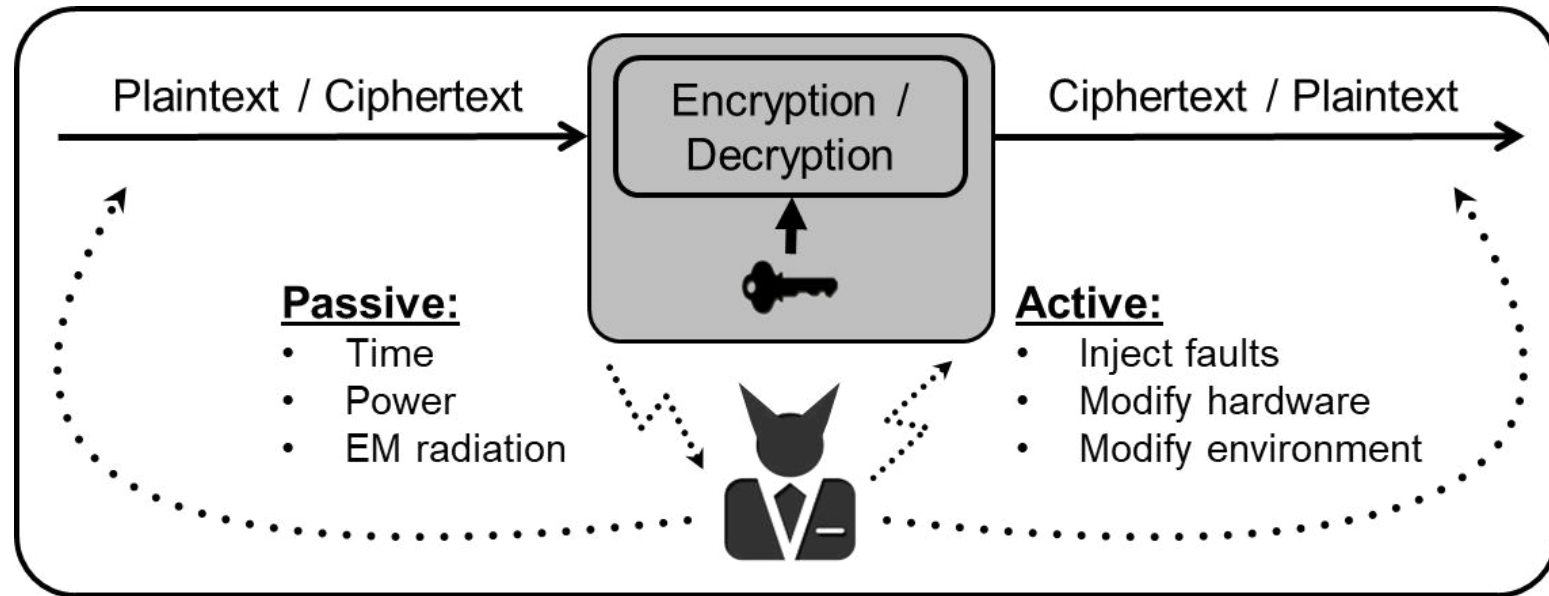

Use meta-information to extract information about the key used in your target platform / product. Many powerful techniques:

*fault injections, simple power analysis, differential power analysis, correlation power analysis, template attacks, higher-order correlation attacks, mutual information analysis, linear regression analysis, horizontal analysis, etc*

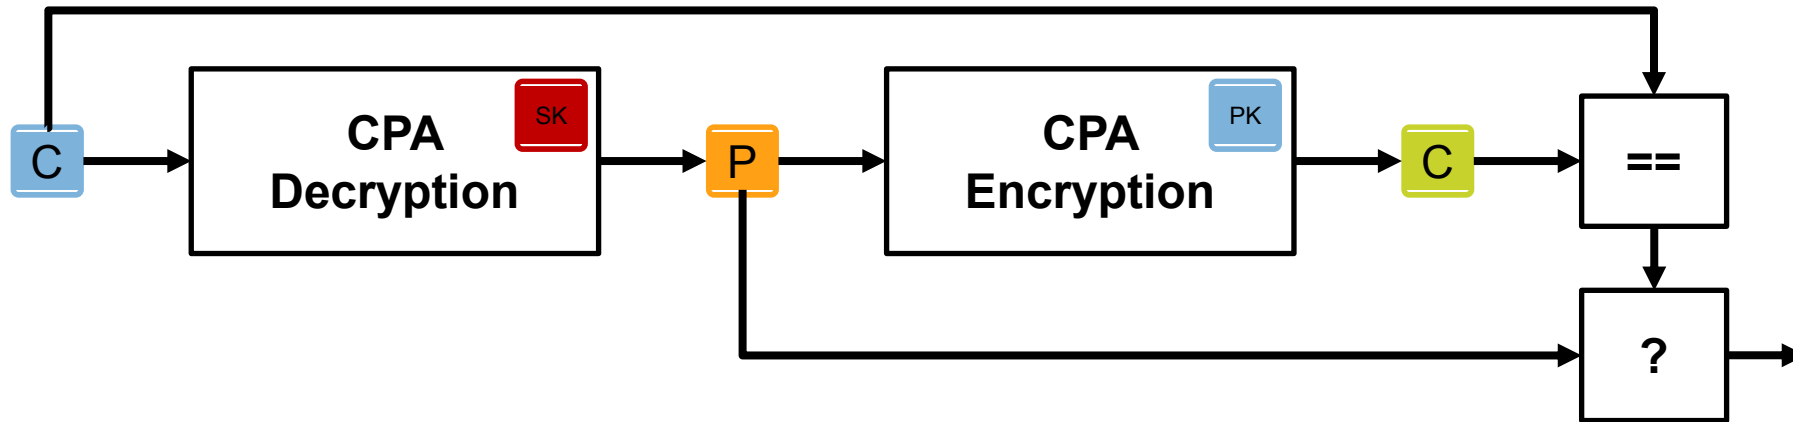

# High-assurance implementations

It took many years to find secure and fast protections for RSA + ECC → still cat-and-mouse game

**What about Post-Quantum Cryptography?**

# FUJISAKI OKAMOTO TRANSFORM

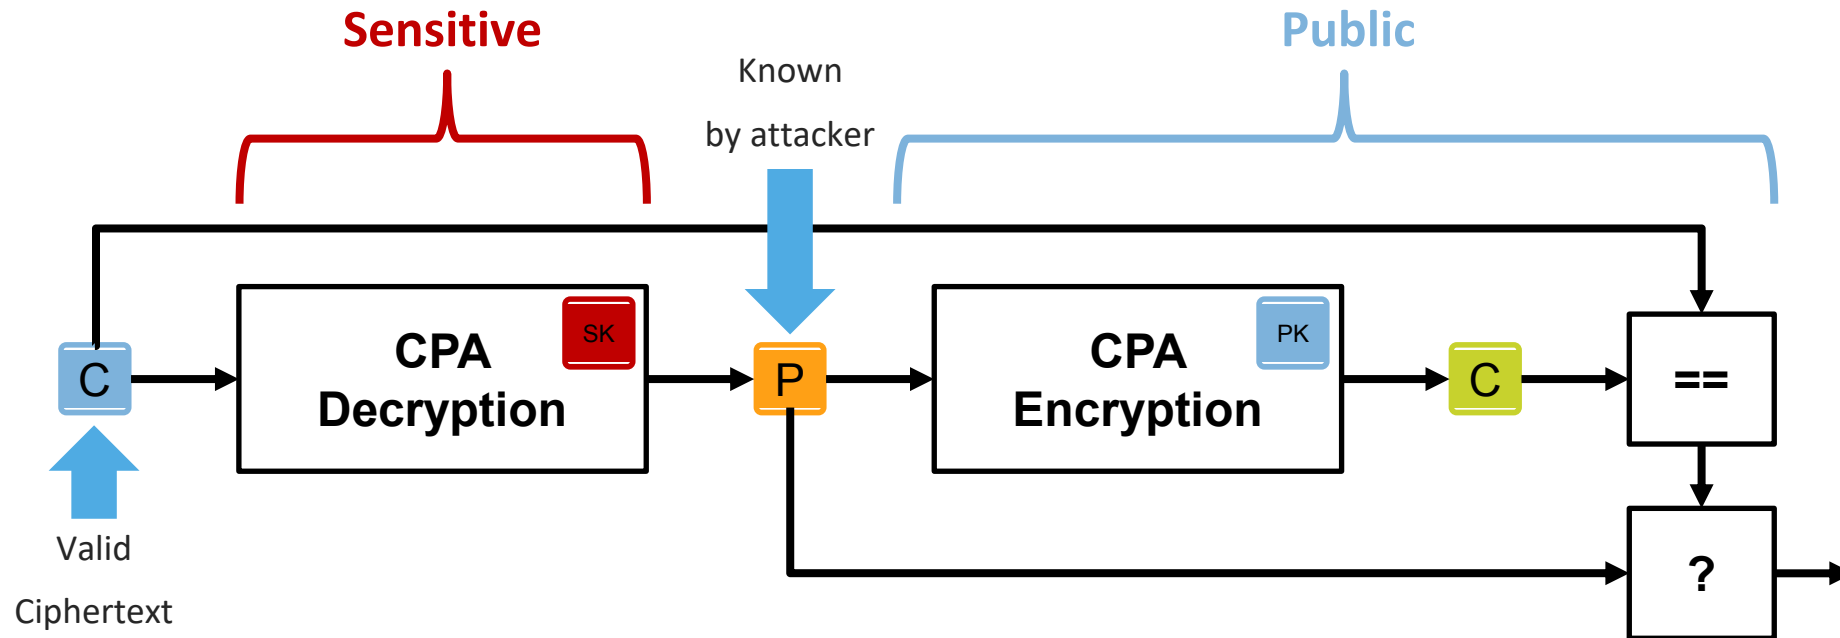

Transform a scheme which achieves **IND-CPA** (“chosen plaintext attack”) security to reach **IND-CCA** (“indistinguishability against chosen-ciphertext attacks”) security

- Fujisaki, E. and Okamoto T., Secure integration of asymmetric and symmetric encryption schemes, CRYPTO 1999 and JoC 2013

# THE SCA PROBLEM OF THE FO-TTRANSFORM

## Attack 1: Chosen Plaintext

- Attacker inputs only valid ciphertexts
- Attack focuses on **CPA Decryption**, everything after (and including) **P** is public
- Only need to protect **CPA Decryption**

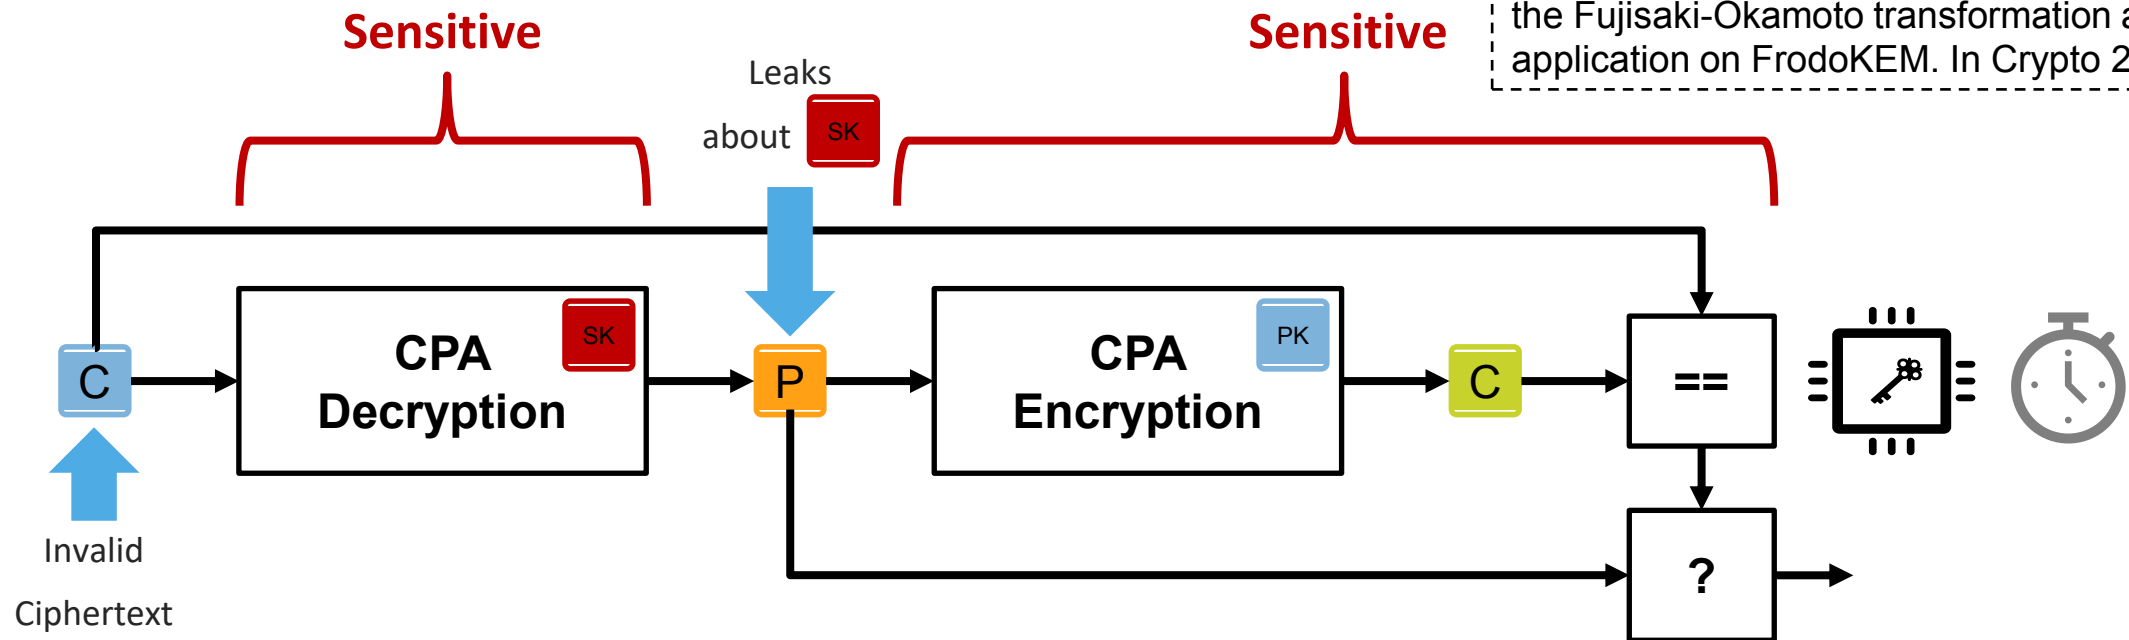

# THE SCA PROBLEM OF THE FO-TTRANSFORM

## Attack 2: Chosen Ciphertext

- Attacker inputs specially-crafted invalid ciphertexts
- Attack focuses on **CPA Decryption** + everything after (and including) **P** is potentially sensitive
- Potentially all (or most) modules need to be hardened

Guo, Johansson, Nilsson. A key-recovery timing attack on post-quantum primitives using the Fujisaki-Okamoto transformation and its application on FrodoKEM. In Crypto 2020.

## THE SCA PROBLEM OF THE FO-TRANSFORM

Why is it bad?

- Millions of Points of Interest (PoI)
- Easy to build templates

Masked Kyber is broken with only 15k traces.

---

### Curse of Re-encryption: A Generic Power/EM Analysis on Post-Quantum KEMs

Rei Ueno<sup>1,2,3</sup>, Keita Xagawa<sup>4</sup>, Yutaro Tanaka<sup>1,2</sup>, Akira Ito<sup>1,2</sup>,  
Junko Takahashi<sup>4</sup> and Naofumi Homma<sup>1,2</sup>

---

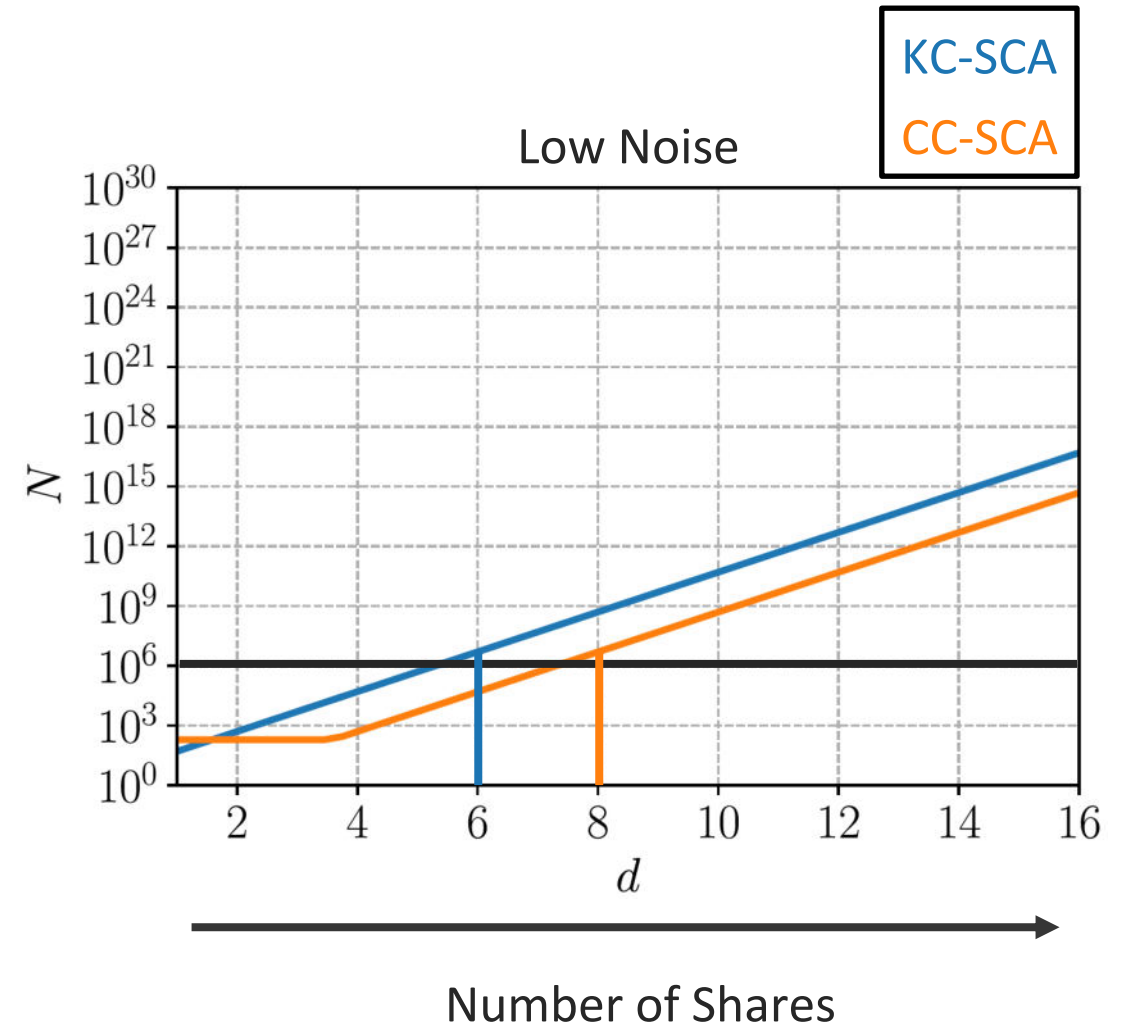

## CASE STUDY: MASKED KYBER

Split variables into  $d$  shares.

Higher  $d$  = Higher security + Increased cost

**Pre-Quantum:** Certified industrial solutions  $d = 2-3$

## CASE STUDY: MASKED KYBER

Split variables into  $d$  shares.

Higher  $d$  = Higher security + Increased cost

**Pre-Quantum:** Certified industrial solutions  $d = 2-3$

For **low noise**:

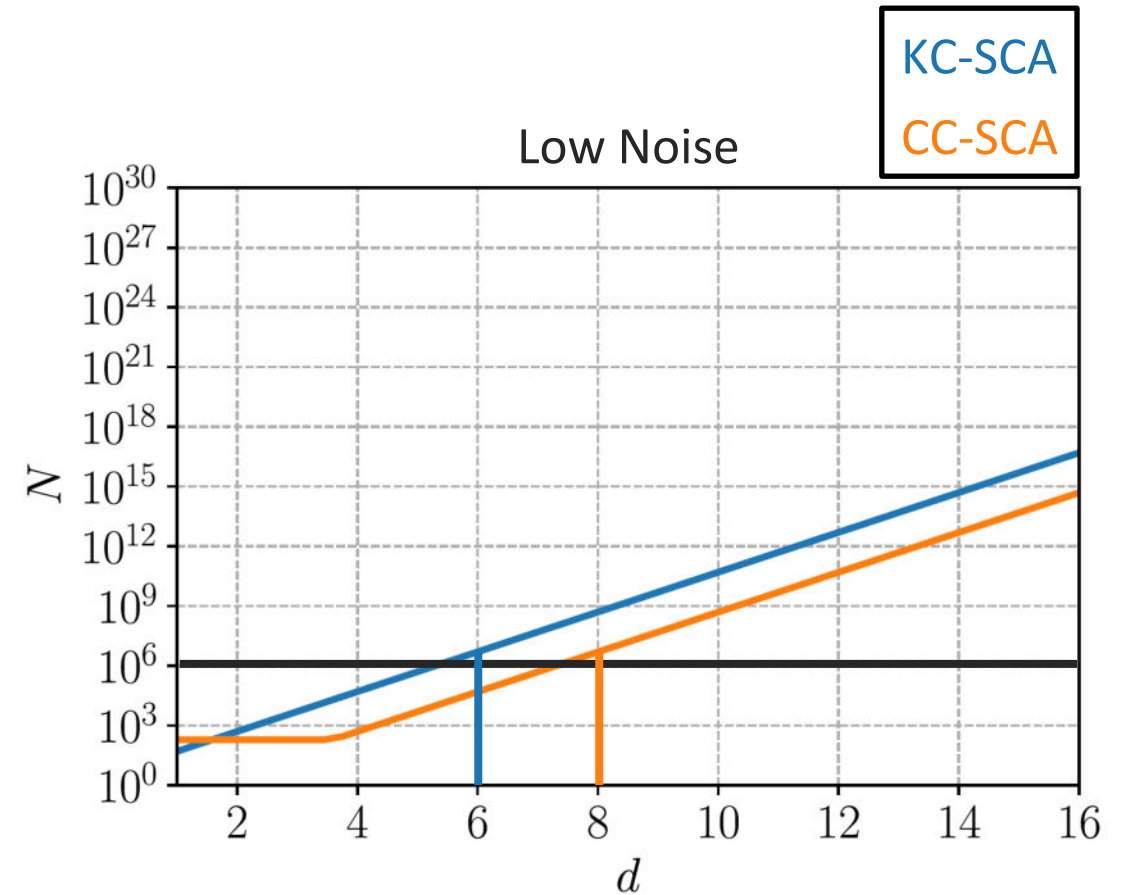

- **Known ciphertext** →  $d = 6$
- **Chosen ciphertext** →  $d = 8$

**FO leakage** causes an increase of **2** shares.

For **high(er) noise**:

- **Known ciphertext** →  $d = 2$
- **Chosen ciphertext** →  $d = 3$

**FO leakage** causes an increase of **1** share.

## CONCLUSIONS

Irrelevant if the quantum threat is real or not

New PQC-Standard are coming!

→ Post-quantum crypto is already being requested by customers in all areas including Industrial, IoT and Automotive!

For embedded platforms challenges in terms of

- Performance, memory and key-sizes
- How to efficiently achieve protection against sophisticated side-channel attacks?

✓ **Think about migration paths now**

✓ **Exciting times to work on crypto & security solutions!**
